

Lab 11 — Create Section, Callout and Dependent Views

Autodesk Revit Architecture Masterclass (C508) · Topic 03: Model Documentation · Tertiary Infotech Academy Pte Ltd

Goal

Create a building section through the model, a callout view of the exterior wall, and a detail callout of the parapet; then duplicate a plan as a dependent view and as a furniture plan.

You'll build

A section view, wall-section callout, detail callout and purpose-made duplicate views.

Tools: Revit · Section tool · Callout tool · Duplicate View

Files in this lab

- LittleHouse.rvt (open in Autodesk Revit)

Step-by-step

1. Draw a building section through the model from the entry-level plan.
`View ► Create ► Section ► click start ► click end`
2. Resize the crop region and flip the view direction if needed, then open the section.
`Drag the blue controls ► double-click the section head`
3. Create a wall-section callout of the exterior wall in the section view.
`View ► Create ► Callout ► Rectangle ► drag around the wall`
4. Create a detail callout of the parapet inside the wall section.
`View ► Create ► Callout ► Detail ► drag around the parapet`
5. Duplicate the entry-level plan as a dependent view and crop it to one wing.
`Project Browser ► right-click plan ► Duplicate View ► Duplicate as Dependent`
6. Duplicate with detailing to make a furniture plan, half-toning the model categories.
`Duplicate with Detailing ► Visibility/Graphics ► Halftone`

Test it

The Project Browser shows the section, the two callouts and the dependent/furniture views; each callout head links to its enlarged view.
